Tendering text - Header :

Super Cereal Plus (SCP) commodity requirements document can be found at:

<http://www.fsa.usda.gov/Assets/USDA-FSA-Public/usdfiles/Comm-Operations/pdf/scp1.pdf>

The following requirements are in addition to the SCP1 CRD and are specific to this invitation:

1. Part 1, D. Regarding Super Cereal Plus formula, the 58.17 percent cornmeal should be derived from de-hulled white or yellow corn as indicated in Part 1, B of Super Cereal Plus CRD.
2. Start-up Run. This is a preparatory run in which the supplier develops baseline data on composition, microbiology, operator training, grading table (sensory analysis) and all calibrations necessary before running at full capacity. This would avoid massive production during the fine-tuning of the system. During this trial-type run, the supplier must run all the analyticals required in the CRD and ensure that the facility is capable of producing the product. At the beginning of this phase, FGIS must be present to conduct a sanitation inspection of the production facility and provide guidance on statistical sampling procedures. Offerors must factor the cost of this visit into their bid price. Additionally, suppliers not currently conducting

business with FGIS will have to establish an account through the Animal and Plant Health Inspection Service (APHIS) or prepay for all services. Contact information for FGIS personnel is as follows:

USDA, GIPSA, FGIS
 10383 N. Ambassador Drive
 Kansas City, MO 64153
 Ph: 816-659-8400 Fax: 816-872-1258
 Ron Metz: Ronald.g.metz@usda.gov
 Jeffrey R. L'Heureux: Jeffrey.r.lheureux@usda.gov

Also during this phase, the purchaser (any or multiple representatives of USDA/FGIS, USAID and/or WFP) may choose to be present. If the purchaser does not attend during the start-up phase, data generated during this phase shall be shared with the purchaser. The data will include inspection certificates from an independent laboratory facility like FGIS or a lab mutually agreeable to FSA and USAID for the testing required in tables 3 and 4 of SCP1. A start-up run is not necessary when the supplier has produced the same product, in the same facility, within the previous three months, as microbiology and production baseline data should have been already developed. Product resulting from start-up may or may not be for delivery under the contract, depending on the level of defects, quality assurance compliance, and presence of on-site FGIS inspection personnel. Decision on acceptability of start-up product will be made by the contracting officer, using inputs from USAID, USDA and the vendor. Full production may continue if start-up initial assessment indicates that adequate process/packaging and food safety capability exists to comply with product specifications.

3. Production Phase. During production of Super Cereal Plus, continuous on-site presence of FGIS inspectors is not required. However, purchasers will continue monitoring food safety and quality through micronutrient and microbiology indicators. FGIS and the supplier shall agree on a sampling plan. Supplier will perform the sampling and ship samples to Kansas City FGIS lab. Samples will be done in a per-lot-basis, defining a lot as a day of production or 110 metric tons, whichever is achieved first.

4. Quality and Food Safety Monitoring Parameters. For Super Cereal Plus production, the key micronutrients to be monitored through independent third party testing on a per-lot basis are Vitamin A and Iron for micronutrient stability, and Coliform and Salmonella for microbiological compliance. Supplier is expected to perform all other analytical requirements indicated in Table 4, internally, on a lot by lot basis and provide CoAs for these requirements. Annually, however, the USG can require comprehensive, independent third-party testing as indicated in tables 3 and 4 of SCP1. It is also expected that the supplier will apply a continuous environmental monitoring program (PEM), based on appropriate and validated HACCP and zoning programs. Any third party testing should be done through FGIS' lab or an agreed upon ISO17025-certified lab. For microbiology, the following sampling and methods shall be used:

Microbiological Coliforms (cfu/g) Test:

IC/SU = I/25; n = 1; c = 0; m = 10; M = 10; /Unit = /g; Method = AOAC 2005.03

Microbiological Salmonella (cfu/25g) Test:

IC/SU = C/25; n = 10; c = 0; m = 0; M = 0; /Unit = /250g; Method = AACC 42-25B

5. Section 2.2 Containers and Materials: In addition to what is established in the SCP1 CRD, primary packaging (bags) and shipping containers (cases) should be of adequate strength for export handling practices

and stacking up to three (3) meters high. Primary packaging should be resilient enough to withstand a load of 10 bags per box. There shall be no zipper in primary packaging, as there is no data indicating necessity or benefits in the field of a re-sealable 1.5 kg bag. Bags should be placed into cases in such a manner as to ensure bag-to-bag contact does not cause packaging and/or packing defects. Shipping containers shall be robust enough to resist typical handling, transportation and stacking. If necessary, vendors are allowed to re-enforce boxes by either strengthening the carton corners or by inserting a plastic liner or both. If by loading 10, 1.5kg-bags in a carton, expansion of secondary packaging is necessary, vendor should agree with purchaser for adequate modifications which would not impact the quality of product or the handling of same. Primary packaging shall not have any other branding other than government branding.

6. Table 4, number 12, Iron. The acceptable range is 8 - 21 mg/100g.

7. Potassium requirements: The 140 mg of potassium per 100 grams of product indicated in Table 2 of CRD is meant to serve as reference in the premix preparation. This level of potassium from the premix is expected in the finished product. However, understanding that there might be intrinsic potassium in the raw components of the products, and mindful that there might be variation in the order of 40-60% throughout the food chain, for analytical purpose (Table 4) it will be allowed an upper limit of 1499 mg of total potassium (including intrinsic content) per 100 grams of finished product, of which at least 140 mg must come from pre-mix source. If required by purchaser, supplier shall share data regarding potassium levels from the premix source in total potassium in finished product.

8. Table 4, number 15, total aflatoxin is 5 ppb.
