Fortified Milled Rice and Milled Rice (MR) commodity requirements document can be found at:

<http://www.fsa.usda.gov/Assets/USDA-FSA-Public/usdfiles/Comm-Operations/pdf/MR25A.pdf>

The following requirements are in addition to the MR25 CRD and are specific to this invitation:

1. Start-up Phase. This is a preparatory or first production run in which the supplier develops baseline data on composition, microbiology, operator training, grading table (sensory analysis) and all calibrations necessary before running at full capacity. This would avoid massive production during the fine-tuning of blending lines. Prior to the actual trial, the supplier shall propose a start-up proposal and discuss with the Contracting Officer and USAID. During start-up run, the supplier must run all the analyticals as indicated below and ensure that the facility is capable of producing the fortified rice with the required micronutrient payload (micronutrient homogeneity, in addition to the Certificate of Analysis (COA) from the premix supplier). Likewise, for microbiology validation, during the start-up, the supplier must generate data to show capability according to Table 2 in the Commodity Requirement Document MR25. For micronutrient testing, third party laboratories need to provide validation data for the methods recommended in Table 1. Since micronutrient extraction in extruded rice kernels would need substantial optimization to achieve reproducibility, for this solicitation, the recommended laboratory is The Siliker Laboratories: <https://www.silliker-estar.com/content.html>

2. During this phase, the contracting agency (any or multiple representatives of USDA/FGIS, USAID, and/or WFP) may choose to be present. If the contracting agency does not attend during the start-up phase, data generated during this phase shall be shared with the Contracting Officer. This data includes certificates from an independent laboratory facility for the testing required in Tables 1 or any additional testing required in the fortified rice CRD such as microbiology compliance in Table 2. The supplier should factor this expense into their production cost. Product resulting from the start-up may or may not be used for delivery under the contract, which will be determined based on the level of defects and quality assurance compliance. Decision on acceptability of the start-up product will be made by the Contracting Officer. Full production may continue if the initial assessment indicates that adequate process/packaging and food safety capability exists to comply with product specifications.

Suggested testing methods in extruded fortified milled rice (mg/100 g):

Micronutrient Vitamin A

Description: **12-1NFP-18-S-0006-P0002**
 Bid invitation number: **2000005107**

Testing method = EN 12823-1 - Prior saponification, an enzymatic digestion as described hereunder is preferable for crude rice

Micronutrient Vitamin B1
 Testing method = EN 14122

Micronutrient Vitamin B3
 Testing method = EN 15652

Micronutrient Vitamin B6
 Testing method = EN 14164

Micronutrient Vitamin B9
 Testing method = AOAC 944.12 / 45.2.03 (1990)

Micronutrient Vitamin B12
 Testing method = AOAC 952.20 / 45.2.02

Micronutrient Iron
 Testing method = ICP (OES or MS)

Micronutrient Zinc
 Testing method = ICP (OES or MS)

3. Rinse and cook-resistance data. During the start-up, rinse resistance and cook resistance data must be generated. However, as indicated in the CRD, Section 1.3.B, verifying the rinse resistant and cook resistant properties of each fortificant is not required for each lot/batch. Following the start-up an annual testing shall be done indicating levels of retention of at least 85% after rinsing and at least 80% of each nutrient listed in Table 1, after cooking.

4. Production Phase. During production of fortified rice, FGIS will certify the grade, percent of broken kernels and milling degree as is currently in place for milled rice. The contracting agency will continue monitoring food safety and quality through micronutrient and microbiology indicators. The Certificate of Analysis from the premix supplier may be used as part of the invoice package and will be considered sufficient for micronutrient monitoring. In-house homogeneity data should be reported as well, indicating compliance with the 1:100 ratio of fortified kernels to milled normal rice, as established in the start-up phase. For microbiology compliance, the supplier is only required to test for yeast and mold as hygiene indicator microbes, using methodology in Table 2 of the CRD. The supplier and the contracting agency shall agree on an adequate sampling plan for both micronutrient homogeneity and microbiology testing. Samples will be done on a per-lot-basis, defining a lot as 500 metric tons.

5. Type of fortified rice. For the purpose of this solicitation, only extruded kernels, as rice-premix, will be procured, using fortification levels and testing methodology in Table 1. For extruded kernels, fortified rice suppliers will have to demonstrate, during the start-up phase, the requirements around rinse-resistance and cook resistance indicated above.
